Profile:

I am keen to pursue a career in the Software Development industry. I am innovative and I love problem solving. I am highly motivated to keep improving what I'm doing and I always strive to do better. I have a strong passion for programming and have done design work for people in the local community.

Hobbies & Interests:

Web Development

I build powerful full stack web applications, using PHP & MySQL for my backend and HTML, CSS and JavaScript for my frontend. I regularly update my GitHub profile with some of these projects.

Server Management

I use an enterprise-grade server at home to store my projects. I have a Dell PowerEdge R610, on which I have experimented with using SMB Shares, FileZilla, SSH and Apache. I am confident with Putty or other terminal applications to remote connect to servers.

Network Infrastructure

I play a large role in the network management at home, as an example of this, I researched and deployed a mesh network solution at home, that has proven to be a massive upgrade over the previous single AP we had previously.

Skills:

| | |
|-----------------------------------|-------------------------|
| PHP/MySQL | High Skill Level |
| JavaScript/jQuery | Advanced Skill Level |
| Adobe Creative Suite (XD, AI, PS) | Medium High Skill Level |
| MS, Google & Apple Office Suites | High Skill Level |
| Python | High Skill Level |
| Linux | Medium Skill Level |

Experience:

- **Web Design @ Winchester Magazine** [2023, Freelance]
In 2023, I completely redesigned the Winchester Magazine website, this work was done through a web design tool as requested from the client
- **Founder @ Cade** [2022 - Present]
In late 2022 I founded and completely built the web design tool Cade. I used many technologies, such as MySQL, PHP and JavaScript, and learned lots in the process.
